

FCYC -----702	Physical Chemistry-V	
---------------	----------------------	--

Module I **(10 hours)**

Thermodynamics: A brief survey of laws of thermodynamics.

Standard States for Gases, Liquids and Solids and its Applications. Free Energies, Enthalpies and Entropies of Ions in Solutions. Activity and Mean Activity Coefficients of Electrolytes and their Determinations, Debye-Huckel Limiting Law. Thermodynamics of Mixing-Mixtures of Volatile Liquids- ideal and Real Solutions and Activities-Excess Functions. Thermodynamic Derivations of Phase Rule, Applications to two component (eutectic) & three component systems involving solids and liquids (Acetic Acid - Chloroform - Water, NaCl-Na₂SO₄-H₂O, NH₄NO₃-(NH₄)₂SO₄-H₂O).

Module II **(8 hours)**

Statistical Thermodynamics: The Boltzmann equation, most probable configuration and concept of residual entropy. The Boltzmann distribution formula.

The concept of partition function, Molecular partition functions: translational, rotational, vibrational and electronic partition functions. Characteristic temperatures, Translational partition function of a mono-atomic gas and derivation of ideal gas equation. Principle of equipartition of energy.

Module III **(10 hours)**

Electrochemistry-I: Conductivity of non-aqueous solutions-effect of ion association on conductivity. The electrode-electrolyte interface-electrical double layer-electrocapillary phenomena- Lippmann equation-the Helmholtz-Perrin-Guoy-Chapmann and Stern models, Electrokinetic phenomena Tiselius method of separation of proteins - membrane potential.

Module IV **(8 hours)**

Electrochemistry-II: Electrode Mechanism of electrode reactions-polarization and over potential -The Butler-Volmer equation for one step and multistep electron transfer reaction- significance of equilibrium exchange current density and symmetry factor-significance of transfer coefficient-mechanism of the hydrogen evolution reaction and oxygen evolution reactions. Some electrochemical reactions of technological interest-corrosion and passivity of metals-construction and use of Pourbaix and Evans diagrams-methods of protection of metals from corrosion, Fuel cells - electro deposition.
